Subject: Proposal — AI-Assisted Connected Patient Flow System (Pilot-First Implementation)

Dear [Name],

Please find attached a high-level implementation proposal for an **AI-Assisted Connected Patient Flow System** at Jinnah Postgraduate Medical Centre — designed to reduce administrative friction in OPD and Emergency care, give doctors immediate access to structured patient history, and provide management with real-time operational visibility.

Key highlights:

- **Pilot-first:** one OPD and one Emergency department delivered in 24–28 weeks, with scale-up based on measured results.
- **Clinician-controlled AI:** the system organizes, predicts and flags — all triage, diagnosis and prescribing decisions remain with your clinical staff.
- **Safe delivery:** full SDLC governance, UAT and security testing before go-live, with a manual fallback at every stage.
- **Indicative investment:** PKR 2.9 crore with milestone-based payments and 10% contingency, refined through a paid discovery and site-survey phase before any commitment.

We would welcome the opportunity to present this proposal in a 30-minute meeting at your convenience, or to begin directly with the discovery phase upon your approval in principle.

Thank you for your time and consideration.

Sincerely,
[Your Name]
